

Specialist fabrications

Structural

The design, procurement, manufacture and erection of complex structures and the production of platforms, plant supports and access walkways all play a key role in our range of services.

We can produce fabrications up to ten tonnes in weight, up to fifteen metres in length either as bolted or welded constructions, and in either galvanised or fully painted condition.

Platework

Our expertise and comprehensive range of modern machinery enables the production of varied fabrications including ductwork, process plant and equipment, materials handling equipment, silencers and combined fuel burners in mild steel and stainless steels.

Welding

Our many years of experience in welding has enabled us to develop numerous procedures covering a combination of MIG, TIG and MMA welding methods, to cope with the different forms of carbon and stainless steels and to join dissimilar metals.

Trent Welding Company Limited
