B.S.2654  
B.S.2594  
B.S.799 pt. 5

Trent Welding produce many diverse sizes and types of vessel from small pulsation dampers for pump manufacturers to large condensate tanks for the steam generating industry. In general we manufacture a full range of

pressure vessels in carbon and stainless steels to suit customer requirements, offering a full design service with final testing and documentation to support the required code.

We undertake site installation if required complete with any supporting steelwork, access facilities and indeed thermal cladding as necessary. Tanks and silos, shop built or supplied in sections for site

erection are an important part of our production and can be supplied in units up to ten tonnes in weight, five metres in diameter and fifteen metres in length.
